

NEW PRICE WORTHY START KIT WITH HIGHER PERFORMANCE

Our new start-kit with 2 on/off receivers plus a remote control is the obvious option when you want to control appliances that has a higher energy consumption than a lamp. Each receiver is capable of controlling devices up to 2300W which makes them very suitable for ie. coffee makers and fans.

Apart from this they also have other features that makes them very price worthy. They have 5 memories which ensures that the memory rarely will be full. But even if it should, you do not have to erase any codes manually. The "First In/First Out"-function will automatically replace the oldest code with the newest one.

The receivers also have a status memory that will remember if the receiver was on or off if a power failure should occur. When the power returns they will start in correct mode.

The receivers are easy to add into our Smart Home user interface, Telldus Live! and you can control them just as you would do with any other receiver.

They may of course be used as stand-alone receivers by pairing them to the included remote control.

In stock now for immediate delivery

- TellStick compatible
- 5 memories with FiFo-function
- More than twice the energy capacity
- Status memory
