

# NEW **DOOR & WINDOW SENSOR** WITH **EXTENDED FUNCTIONS**

Among the benefits of our new door and window sensor are better transmitting range, easier installation and a multi-function button that is used to both programming and to send an "on"-signal to a receiver.

But the greatest news is that it is very easy to add it into our Smart Home user interface, Telldus Live! Now you can let the sensor be a part of the smart home and through the Event settings you can have it take care of a bunch of smart tasks.

It may of course be used as a stand-alone sensor connected to a single receiver.

Everything needed for installation is included in the packaging. Battery is also included. The single pack is in stock now for immediate delivery, while the double pack will be available in August 2014.

- **TellStick compatible**
- **Multi-function button**
- **Available in both single and double pack**

## Technical specifications

Range . . . . . ca 30m (free sight)  
Protection class. . . . . IP20  
Frequency. . . . . 433.92MHz  
Dimensions magnet (WxHxD) . . . . . 14x65x14mm  
Dimensions transmitter (WxHxD) . . . . . 38x65x18mm  
Battery . . . . . 1x 23A 12V  
(up to 1 year life length depending on trigger amounts)
