

# NEW THERMO SENSOR TO USE IN MANY DIFFERENT WAYS

We enhance our assortment of sensors to the smart home. This is a sensor that measures temperature both in- and outdoors. Just place the main unit indoors and put the probe through the window.

You can also put the main unit outdoors and the probe somewhere else to keep track of two different outdoor temperatures. Perhaps you have a garden pond? Then place the probe in the water to keep track of the water temperature. Or why not use it to your aquarium or terrarium. Or your greenhouse. Well, you see, the opportunities are only limited by the imagination.

The sensor is easy to include in our Smart Home user interface Telldus Live! so apart from monitoring temperature, you can also let it trigger other parts in the system through the Event section.

The sensor may of course be used as a stand-alone since all data is also shown in the two displays.

In stock now for immediate delivery.

- TellStick compatible
- Approved for outdoor use
- Measures temperature
- Battery operated = Ultra portable

## Technical specifications

Range . . . . . ca 30m (free sight)  
Protection class. . . . . IP44  
Frequency. . . . . 433.92MHz  
Voltage . . . . . 2x1.5V AAA Batteries (not incl)  
Temperature . . . . . -40°C - +60°C  
Accuracy temperature. . . . . ±1°C  
Channels. . . . . 8
