

NEW RECESSED RECEIVERS WITH EVEN BETTER FEATURES

311369: On/Off

311370: On/Off/Dimmer

Our new recessed receivers have several new functions which make them to the obvious option when you want to control your ceiling lights or other permanently installed appliances.

They have 5 memories which ensures that the memory rarely will be full. But even if it should, you do not have to erase any codes manually. The FiFo-function will automatically replace the oldest code with the newest. The receivers also have a status memory that will remember if the receiver was on or off if a power failure should occur. When the power returns they will start in correct mode.

The receivers are easy to add into our Smart Home user interface, Tellus Live! and you can control them just as you would do with any other receiver.

They may of course be used as stand-alone receivers by pairing it to a regular remote control.

Should be installed by an authorized electrician. In stock now for immediate delivery

- TellStick compatible
- 5 memories with FiFo-function
- With or without dimmer function
- Status memory

Technical specifications

Range ca 30m (free sight)
 Protection class. IP20
 Frequency 433.92MHz
 Dimensions (WxHxD) 70x52x31mm
 Voltage 230VAC
 Load on/off 1000W
 Load on/off/dimmer 40W-300W
