

NEW **DOOR/WINDOW SENSOR** WITH MORE **SMART FUNCTIONS**

Now it is time to launch yet another door/window sensor in our assortment. This is a little bit smaller one with sleek design with easier installation on narrow door and window frames.

Apart from the design we have also equipped it with a delay function which may easily be chosen by the moving a jumper. You can choose between 5 or 10 minutes delay for the off-signal.

The sensor is powered by a standard 3V button cell battery, which can be purchased at most stores. It has a life length of approximately 1 year and is easy to replace when time comes.

It is easy to add to our user interface, Telldus Live! where you can create schedules and events for even more applications. For example, let the sensor control more appliances at the same time. Add conditions so the sensor only works at a specified time. Or why not let it control both a receiver and a doorbell or send a message when a door is opened.

The sensor may of course be used stand-alone by connecting it to a single receiver.

In stock now for immediate delivery.

- **TellStick compatible**
- **Delay function**
- **Small and elegant**
- **Low battery consumption**

Technical specifications

Range ca 30m (free sight)
Frequency. 433.92MHz
Voltage 1x3V CR2032 Battery (included)
Delayed off-signal 0, 5 or 10 minutes
Dimensions sensor (WxHxD) 24x60x14mm
Dimensions magnet (WxHxD) 10x40x13mm
